About

Building a stronger STEM community! That's the simple idea behind the mission of Omaha STEM Ecosystem (OSE) as we connect education and business development resources for the workforce of the future. The demand for STEM talent is increasing throughout the state of Nebraska as STEM occupations are projected to grow by 11% between 2020 and 2030, faster than non-STEM occupations at 7.7% (Nebraska Department of Labor, 2022). The OSE works to address this problem by exposing students to STEM resources, ensuring our community remains a robust center of innovation and excellence.

You are invited to explore programming, internships, careers and more online at the STEM Community Platform (SCP), a partnership developed with AIM Institute. In addition to information and event details, you will find the opportunity to become an official sponsor of our Omaha STEM Connect Series events. Your support is vital and greatly appreciated!
